

BODY OVERBOARD (BOB) TRAINING DUMMY

THE FIBRELIGHT BOB DUMMY IS AN INEXPENSIVE TRAINING AID TO ASSIST USERS IN PRACTICING THE RECOVERY OF AN UNCONSCIOUS CASUALTY WITH A FIBRELIGHT CRADLE OR SIMILAR PRODUCT. THE FIBRELIGHT BOB IS EASY TO STORE ON A VESSEL AS IT TAKES UP VERY LITTLE SPACE; IT IS FILLED WITH WATER ONLY WHEN IT IS NEEDED FOR TRAINING AND EMPTIED IMMEDIATELY THEREAFTER.

Now in its third design iteration, BOB has a watertight internal lining which not only prevents leakage but also allows for an increased weight of up to 55kg. BOB has retained the PU coated heavyweight polyester outer fabric and is neutrally buoyant when filled with water. More than ever BOB accurately replicates a real-life casualty and is an ideal training aid.

BOB has been fitted with straps across its body and legs to add robustness, simulate clothing and to aid with recovery; these straps allow a hook or pole to be used to bring BOB alongside the vessel for recovery drills to be performed.

Patents / Certificates:

IPO - Registered Design
Number 5003208

KEY FEATURES

- Realistic
- Folds flat for easy storage
- Simple to use
- Inexpensive

SPECIFICATIONS

Width:	0.6m
Length:	1.74m
Weight when full:	Up to 55kg
Weight when stored:	Less than 2kg
