AIR QUALITY TEST KIT

When it comes to the optimum safety of all crew members and passengers in maritime field, the quality of breathing air has a crucial importance.

The required quality of breathing air stated in BS EN12021 and MSC1432 IMO legislations is to provide information regarding the safe limits of potential contaminant gases within the air. MSC 1432 IMO recommends to check that all breathing apparatus, face masks and air demand valves are in serviceable conditions.

SafeTMade's breathing air quality test kit allows you:

- to measure CO level
- to measure CO_2 level
- to measure H_2O level
- to measure Oil Mist level in breathing air coming through low/high pressure cylinders and compressors
- to have a general idea regarding the performance of your compressor and air filtration system.
