

LIFEBUOY RRU (REMOTE RELEASE UNIT)

Launching a lifebuoy to required location at the right time is the key for saving lives. SafeTmade Lifebuoy Remote Release Unit can be used at anywhere onboard a ship easily and safely. Differently from similar products, the system does not occupy a large place, is easy-to-access and completes its activity within the shortest time. Furthermore, it is proper for every sea vehicle.

SafeTmade remote release unit has two types of this mechanism, one of which has a mechanical structure and the other is activated manually by pulling a safety pin. When the system is activated, the strong spring system puts the operation handle into action. The part holding the lifebuoy is easy to reach on both sides and can be easily mounted anywhere on a ship (either on boardside or starboard). Main features of the system can be emphasized as herein below;

- *The lifebuoy is launched in a safe and quick manner and can save lives.
- *The system can be mounted easily.
- *All required connection parts are provided with the product, so it is quite economic system.
- *It is activated from the bridge mechanically.
